

Microsoft Azure

CLOUD COMPUTING PLATFORM AND SERVICES

What is Microsoft Azure?

Microsoft Azure is a cloud computing platform from Microsoft, providing a set of integrated services - analytics, computing, database, mobile, network, storage, and web - that allow organizations to build their own technological environment, in a more efficient, flexible, and adaptable way.

Did you know that 90% of companies on the “Fortune 500” list trust Microsoft Cloud? Microsoft Azure helps you protect your resources through a rigorous methodology, based on security, privacy, compliance, and transparency.

With Microsoft Azure, your organization has a global reach, provided by a network of data centers in 34 regions.

Only Microsoft offers a flexible platform that lets you choose the right IT path for your business, whether it's on-premise, cloud, or a hybrid combination.

“ Testimonies

“With the launch of the new Dynamics NAV platform on Microsoft Azure, we went from about fifty complaints a day to zero – and the emails we receive are now praise and not complaints.”

Andrew Sabino
Anticimex Iberian IT Manager

Azure IAS for Dynamics

A complete cloud migration lets you maximize your organization's computing power.

Make smarter decisions, recreate business processes faster and drive your business growth with a cloud-based enterprise resource planning (ERP) solution. Built for Azure, and in Azure, bringing together ERP, business intelligence, infrastructure, computing, and database services.

With Arquiconsult's implementation and management services and Microsoft Azure virtual machines, we offer one of the most robust solutions to control the computing environment of Dynamics solutions.

Azure virtual machines offer virtualization flexibility without having to purchase and maintain physical infrastructure, so your organization saves time and money.

Azure Backup for Dynamics

Azure Backup for Dynamics is a simple and cost-effective backup-as-a-service (BaaS) solution. It provides data protection for Dynamics solutions, no matter where they are located — in your company's datacenter, in distant offices or branches, or in the public cloud — always with the necessary flexibility to face the unique requirements that each of these scenarios presents. Azure Backup for Dynamics, in conjunction with Azure Site Recovery, gives you minimal maintenance and cost-effectiveness, tools for operational backup and recovery, and data protection.

Organizations are forced to protect data for years and, over time, that data grows exponentially. With Azure Backup Dynamics, organizations have an alternative with significant cost savings, shorter recovery times and up to 99 years of retention. There is also the possibility of performing geo-replicated storage, which means the existence of six copies of data in two different datacenters, with a service availability of 99.9%.

About Arquiconsult

Arquiconsult is an information system consulting company, based on Microsoft Dynamics technologies, with offices in Lisbon, Porto, Vila Real, Barcelona, Madrid, Salamanca, Seville and Luanda. Composed by the largest and most experienced team of consultants, having already implemented some of the most complex Microsoft Dynamics Business Solutions and being frequently referred to international clients for their implementations in our country.
