Microsoft Dynamics 365

Simplify the creation of intelligent applications and automate processes with Microsoft Power Apps, Microsoft Power Automate and Microsoft Power Bi.

Microsoft Power Platform is the union of 3 brand tools: Power Apps, Power Automate and Power BI. This combination of tools proves to be valuable for companies as it facilitates data analysis, decision making and process automation.

- With Power Apps the necessary actions become clearer.
- With Power Automate, automated workflows are created.
- With Power BI it is possible to analyze company data.

• FAST IMPLEMENTATION

Create Apps based on pre-built templates, with a simple drag and drop, allowing for quick implementation.

• INTERNAL DEVELOPMENT

Give your organization the possibility to create the Apps they need, with advanced features, without the use of professional programmers, including pre-built artificial intelligence components.

• DO IT YOURSELF

Provide your Developers with the tools they need to seamlessly expand Apps capabilities with Azure functions and other connectors.

MICROSOFT POWER APPS

Easily create applications that adapt to your needs. Use pre-built AI templates and components for quick implementation.

FEATURES

- Create your applications, easily on any device, with visual and intuitive tools that do not require code.
- Customize every detail of your applications or start from a sample that presents common scenarios.
- Use your data model to generate responsive and immersive applications that can be run on any device.
- Unlock your data from the Common Data Service (CDS), integrate forms, views and graphs guided by models and merge your Power BI reports or dashboards.

MICROSOFT POWER AUTOMATE

Automate processes and expand your applications, connecting them with Azure functions and other connectors, for better management of your business.

FEATURES

- Connect Power Automate to Power Apps and use the 'flow designer' to create and execute your business logic.
- Track users and ensure data reliability, regardless of where they are inserted.

- Access data to create effective workflows with a simple language, like Excel, that allow greater productivity and collaboration between team members.
- Integration with SharePoint, OneDrive for Business and Dynamics 365 offers automation of the applications you daily use.
- Connect to more systems and have additional control, through integrated extensibility to your developers. For complete workflow management, create and manage logical applications in Azure.

ADVANTAGES

COMPLETE DATA PROTECTION

Better protect your data in Power BI reports, dashboards and datasets with persistent protection that continues to work even when shared outside your organization or exported to other formats such as Excel, PowerPoint and PDF.

120 FREE CONNECTORS

With a growing library of over 120 free connectors. Connect directly to hundreds of on-premise and cloud data sources such as Dynamics 365, Azure SQL Database, Salesforce, Excel and SharePoint.

BEST FEATURE MATCH

When you use this solution with Azure and Office, you get the most value out of your technology and data. Since Power BI natively interacts with Microsoft technology, it can use all of your data productively.

MICROSOFT POWER BI

Easily work together on the same data, collaborate on reports, and share information across common Microsoft Office applications, empowering everyone in your organization to quickly make data-driven decisions that drive strategic action.

- POWER BI DESKTOP
- POWER BI EMBEDDED
- POWER BI SERVICE
- POWER BI MOBILE

Why this Solution?

FOR CONFIDENT DECISION MAKING

Easily work together on the same data, collaborate on reports, and share information across common Microsoft Office applications like Microsoft Teams and Excel, empowering everyone in your organization to quickly make data-driven decisions.

TO CREATE AMAZING DATA EXPERIENCES

Easily connect, plan and visualize your data by creating custom reports with your KPIs and your branding, getting quick responses using AI technology.

TO OBTAIN INFORMATION FROM DIFFERENT SOURCES

Make the most of your large investments in 'macrodata' by linking them to all data sources with the scale to analyze, share and promote information across your organization while maintaining the accuracy, consistency and security of your data.

ABOUT ARQUICONSULT

Arquiconsult is an information systems consulting company, based on Microsoft Dynamics technologies, with offices in Lisbon, Porto, Vila Real, Barcelona, Madrid, Sevilla, Salamanca, Luanda and Riyadh.

Composed of the largest and most experienced team of consultants, having already implemented some of the most complex Microsoft Dynamics Business Solutions and being frequently referred to international clients for their implementations in our country.

Arquiconsult is constantly innovating its offer and has several verticals available, for various sectors of activity, which add value to Microsoft Dynamics 365.
