Qmobile

### QMOBILE what is it?

Qmobile is a mobile warehouse application solution developed by Arquiconsult, designed to support in a simplified way the base processes of the warehouse operations.

### ABOUT THE Solution

With Qmobile your employees will become more efficient, making fewer mistakes, since this mobile warehouse solution provides the requirements and information needed to streamline operations.

It has an interface and graphic simplicity, allowing easy usage and configuration, adapted to the demands of each individual user.

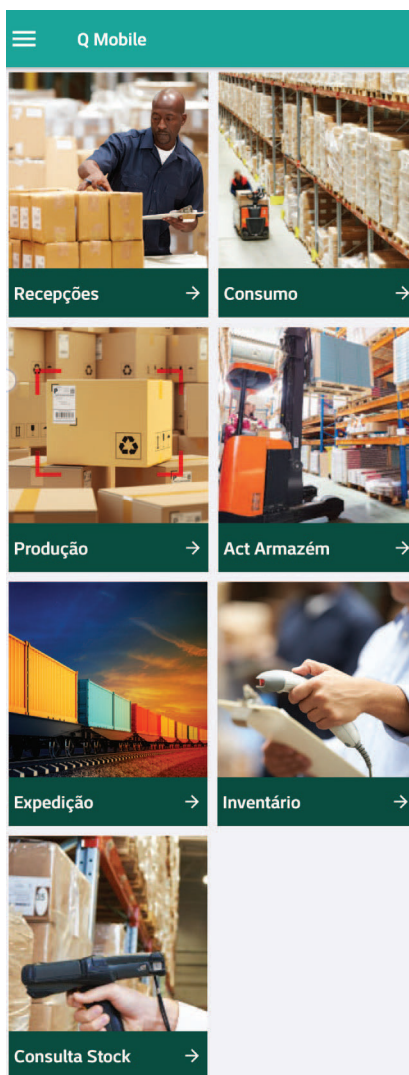

Information can be checked in real time, which enables decision-making and immediate action, e.g. making it easier to post item transfers from one physical location to another, or post stock adjustments.

The setup and solution support are integrated directly into the standard features of Microsoft Dynamics 365.

Small configurations, such as modifying the information display or the available permissions per user, are setups performed directly in Microsoft Dynamics 365 without the need to technical development.

THE SOLUTION THAT WILL REDUCE TIME,  
REDUCE BUREAUCRACY PROCESSES,  
INCREASE THE EFFICIENCY OF YOUR TEAM  
AND INCREASE YOUR BUSINESS

### BENEFITS

#### Reduction of errors and suppression of paper work

All records associated with item movements are checked through an embedded barcode reading thus avoiding user errors.

#### Simplicity of use

A set of several easy-to-use applications, focusing on minimizing clicks and providing to the user only relevant information of the process.

#### Customer service improvement

Ability to ship orders on time and with less risk of errors. Ensure more efficient delivery capability with "zero error tolerance".

#### Configurable and fully adaptable

Standard features cover the base requirements of most businesses, but from time to time, a specific business process calls for a specific solution. QMobile can easily be extended with customized features adapted to your own requirements.

# FEATURES

**Qmobile allows you to streamline several tasks, such as:**

## POST INBOUND MOVEMENTS

Simple item post in your warehouse to the physical location where they are stored, such as purchase receptions, transfers or returns from sales;

## POST OUTBOUND MOVEMENTS

Collection ("picking") of items from their physical locations and preparation for shipment, registration of shipments or sales orders;

## INTERNAL MOVEMENTS POSTS

Examples of physical movements of items at the time they occur, moving between physical locations during a replenishing of bins, or simple adjustments and transfers between locations;

## PHYSICAL INVENTORY

Inventory counts posting. Allows you to make corrections whenever an error is detected, as well as advanced physical inventory counting, by automatically creating count teams and collection warehouse counts;

## ITEM TRACEABILITY

Identification of items with serial or batch control by scanning the serial or batch codes. In case of reading a serial number, you only need to scan the code without having to type in the quantity;

## SMART DOCUMENT SELECTION

Allows the reading of the items to receive and automatically assigning of the right order;

## MANUFACTURING POSTS

Confirmation of consumptions and output productions, using released production orders in the system;

## SMART STOCK QUERY

Query the several stock statuses, by item, bin content or batch / serial number. If item traceability is unique then the system can recognize these codes instead of the item code;

## SECURELY STORED RECORDS

The record made on the mobile device it is stored in a local database, ensuring that it is never lost, even when the mobile device runs out of battery.
