

# ARQUICONSULT

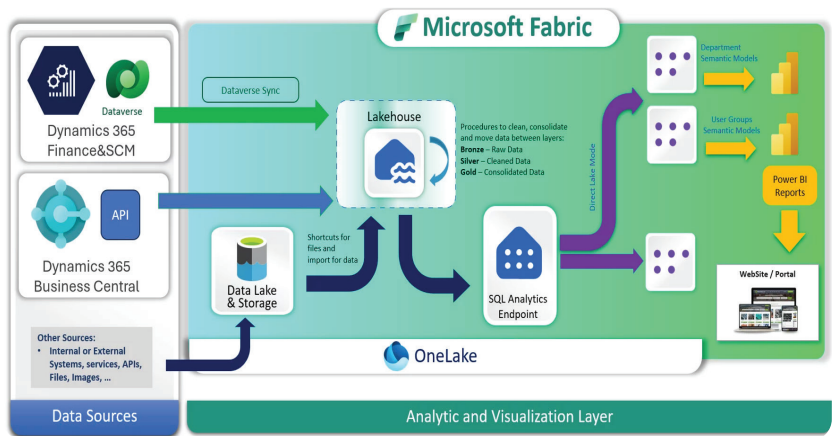

Your success. Our solutions.

Arquiconsult's Technical and Functional teams, are 100% dedicated to the implementation of **Microsoft solutions**.

**Microsoft Fabric** can revolutionize the way your organization takes advantage of the information extracted from your management and operational systems, along with the experience of our teams in the development of these architectures. With end-to-end integration, and powerful analytics tools, Microsoft Fabric empowers your business to extract valuable insights and make informed strategic decisions.

Microsoft Fabric is indeed a revolution that arrived on the market, and initial step may not be so clear, but Arquiconsult's experienced BI & Data Analytics team is available to help you start this journey, following the principle of Start Small & Think Big.

Intrinsically scalable, this new platform invites us to start the journey, with a small but important process, to quickly derive value from the solution, while ensuring that the necessary foundation is installed for the following interactions.

## We are immersed in Data

The applications we use, the things we search for conversations we have, the products that we buy and devices we use – all these only have one thing in common, the data. They are transversal. With the advancement of AI, data has become more important for the organizations in all sectors of activity. Many companies have already taken some steps towards becoming data-driven organizations, but the vast majority still fail to adopt a truly data-driven management culture.

One of the main challenges they face is the diverse and fragmented landscape of data and AI technologies available on the market. There are numerous tools, frameworks, and platforms, each with its own set of advantages and limitations. This heterogeneity often lead to complexity and inefficiency, preventing organizations from harnessing the full potential of their data, and often delaying evolution in this area.

**Data Analytics for the era of AI**

Unified Storage and Compute

Unified Experience

Unified Governance

Unified Business Model
