

THE ERP SOLUTION FOR SHIPOWNERS AND SHIPPING AGENTS

NAVship is a management solution specifically developed for companies in the maritime sector, including shipowners and shipping agents, allowing integration with port operators, customs and port authorities. NAVship serves as a strategic ally in decision-making and as a tool that enables you to respond quickly to market changes, regulatory requirements in the sector, and the operational and commercial particularities of your clients. It helps you maximize profitability, streamline operations, and control results.

With a wide range of features designed for fleet management, ship scheduling and maritime freight, NAVship is a comprehensive out-of-the-box solution tailored to the needs of both domestic and international maritime transport.

Built on Microsoft Dynamics 365 Business Central and fully accessible via a web browser, NAVship is a powerful tool for shipping companies, addressing their specific needs in the following areas: commercial, cargo management, fleet management, financial management and reporting. It also covers the usual requirements most companies have for accounting, logistics, and administration.

Count on NAVship and the experience of Arquiconsult's team of certified consultants to implement the solution that will simplify and control maritime operations, boost efficiency, and prepare your business for the future.

COMMERCIAL MANAGEMENT

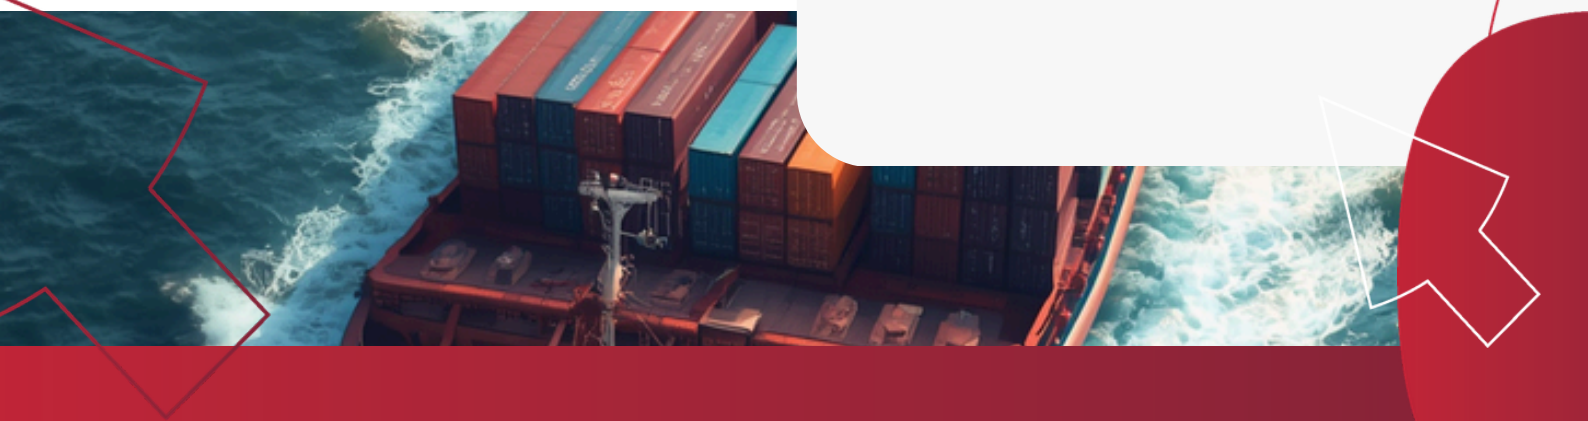

Functionality designed to support maritime agency and logistics companies, offering a platform that simplifies client relations and improves commercial efficiency.

- Easily identify the conditions proposed to clients.
- Create and manage quotation proposals.
- Control contract versions, with a history of rejection reasons.
- Integrate with Dynamics 365 Business Central and Microsoft Dynamics 365 CRM.
- Monitor commercial tasks and activities in real time.

CARGO/FREIGHT MANAGEMENT

Cargo management helps organize and control every detail of maritime and logistics transportation, ensuring transparency and efficiency.

- Define voyages, routes and port calls.
- Create bookings quickly.
- Issue mandatory documentation for clients, ports and customs authorities.
- Manage part-load cargo.
- Accurately prepare process quotations.
- Contract additional services, such as land transportation, customs clearance, among others.

SHIP AGENCY

The ship agency module was designed to make the management of port calls more agile and transparent, ensuring complete cost control and effective communication.

- Register vessels and monitor their port calls.
- Control costs and issue estimates (Disbursement Account).
- Manage Cash in Advance and Cash to Master (CTM).
- Issue detailed port call accounts.
- Facilitate communication with all parties involved.
- Record events or additional needs during port calls.

FLEET MANAGEMENT

Fleet management provides complete control over containers and the fleet, reducing costs and increasing operational availability.

- Register and monitor containers.
- Set up container movement cycles and limitations.
- Track availability and movements in real time.
- Establish overstay rules to optimize costs.
- Access comprehensive container dashboards.
- Integrate fleet movements and/or terminal operations in COPARN / COPRAR / VGM formats.

FILE MANAGEMENT

With file management features, you will have the ability to monitor all operational and financial phases, ensuring a comprehensive view of your business.

- Precisely control each operational file.
- Compare budgets with estimates.
- Perform provisional closures based on actual and projected data.
- Integrate directly with accounting for greater efficiency.
