

THE ERP SOLUTION FOR TRANSPORT AND LOGISTIC SERVICES PROVIDERS

WHAT IS NAVITRANS?

Navitrans is a complete software solution, designed and built for the logistic services providers industry, that can help you make smarter decisions, provide your customers the service level they expect, grow worry-free and prepared for future challenges.

With an extensive set of features for road, air, sea, intermodal transport and warehouse logistics, Navitrans is the most complete out-of-the-box software on the market.

Navitrans is an Add-on for Microsoft Dynamics 365 Business Central and it's fully web used. It consists of 3 main modules: Transport, Forwarding and Warehousing. The three modules are designed to work independently; however, they can also work seamlessly integrated.

Count on Navitrans, and the experience of Arquiconsult's implementation team, to help you provide your company a new base of information, operationalization and total control, preparing your business for the future.

TRANSPORT

FORWARDING

WAREHOUSE

TRANSPORT

Navitrans Transport is a very complete software, built for the industry, designed for efficiency. It translates the complex reality of transportation companies into easy-to-control processes.

With Navitrans Transport you can:

- Register your transport requests easily and quickly.
- A flexible planning tool for a new generation of planners.
- Take the complexity out of your trips management.
- Calculate detailed costs and increase your business margins.
- Easily adapt to complex price agreements with your customers.
- Create invoices according to customer requirements in the blink of an eye.
- Speed up the invoice receiving process.

FORWARDING

Navitrans Forwarding was specially developed to transform the complex reality of freight forwarders that manage sea, air and intermodal freight into easy-to-use processes. It has flexible configuration possibilities to easily adapt the different flows that you need to handle with different markets and customers.

With Navitrans Forwarding you can:

- Gain direct access to all relevant information in a single digital archive.
- Communicate easily with all parts of the supply chain.
- Drive your processes with predefined and flexible workflows.
- Focus fully on the special needs of your customers.
- Combine costs from different service providers and create quotes quickly.
- Control end-to-end the revenue and cost of your processes, from quotation to final invoice.

WAREHOUSE

Navitrans Warehouse is an advanced warehouse management solution, 100% designed for logistics service providers that offer public warehousing services. It has a high level of flexible configurations to easily adapt to the different flows that you need to deal with for your different customers.

With Navitrans Warehouse you can:

- Reduce storage workforce costs.
- Provide the quality of service your customers expect.
- Have full visibility of inventory and tracking of item movements.
- Provide value-added logistics services.
- Focus on managing relationships and interactions with your customers.
- Adapt to variable agreements depending on the customer.

ETAF – Transportes Álvaro de Figueiredo, S.A.
Joaquim Tavares, Administrator

"We implemented Navitrans in 2009 in the Operational and Financial area, having maintained a partnership relationship characterized by mutual trust, but, above all, by the certainty that we are following the evolution of our needs. We recognize the potential of this solution and Arquiconsult's responsiveness, which allows us to develop in this area, that is strategic for the growth of our business. We will certainly continue to invest in this solution and in this Partnership."

TJA - Sandra Amador,
Directora Financeira

Navitrans solution allows us an integrated management in Transport area. The solution can manage and process information relating to transport operations, integrating different management structures in a single platform, including maintenance, processes, resources, incidents, performance indicators, allowing an important work efficiency. The solution, together with satellite solutions, has allowed TJA to continuously analyze and improve operations' efficiency. With the growth of global competition, TJA faces challenges in all aspects of its operations, including the need for technological improvements and Navitrans has contributed to the fulfillment of the demands for this dynamic management.

TESTEMUNHOS DE CLIENTES NAVITRANS

Grupo Sousa
Sérgio Matos, Administrator Director

The implementation of Navitrans in our operation allowed us to obtain better information and greater productivity, translating into a competitive advantage for the challenges presented by our industry. We found in Arquiconsult the ideal partner, for the close and trustful relationship, for the knowledge of our business, for its availability and for the competence demonstrated.

TCP – Transportes Central Pombalense
Gumerzindo António, Administrator

The advantages that Navitrans brought to the operation of Transportes Central Pombalense were mainly the centralization of transport and logistics services in the various departments, greater speed and ease in billing processes, integration of automatic tariffs and control and monitoring of services and costs in transport processes. (...)

Klog
Jorge Cernadas, Financial Director

Anyone who has gone through an ERP implementation process knows that it can be a complicated process and with many obstacles for various reasons, and the truth is that after three months, after Go Live, we have not had any mishaps, we have met the timings and the project was within budget, which as far as I'm concerned is also an important part. It really shows that the project was well structured, and I think this is the best compliment we can give a partner in this kind of project.

TFS – Transportes Florêncio e Silva
Nelson Lopes, Logistics Director

Navitrans WMS has brought to TFS Logistics operation greater productivity gains, while at the same time giving us the ability to monitor all activities in real time. The objective was to ensure fast lead times between ordering and delivery. This has always been a very ambitious goal, which could only be achieved with a modern WMS system such as the Navitrans WMS.
